

ABSTRACT

The present invention provides a curable composition capable of giving rubbery cured products having excellent
5 adhesion properties against all-purpose substrates, improved
in weather-resistant adhesion properties against
photocatalyst-coated transparent adherends, low in modulus and
high in elongation and, further, showing high weather
10 resistance without undergoing surface cracking or
discoloration even when used outdoors for a long period of time.

The curable composition of the present invention
comprises a vinyl polymer (I) the main chain of which is the
product of living radical polymerization and which contains at
least one crosslinkable silyl group, and an antioxidant (II).
